The article discusses the problem of "acme" in the context of content and relationships of functional systems, which provide the efficiency of professional activity and social success of man as its subject. Two criteria – the measure of specialization of functional systems and the closeness of the relationships of the subject to environmental conditions, allow us to identify and arrange the concepts, according to the contents of the concepts which they denote: as Makings < Abilities < Special abilities < Professional abilities < Professional important qualities < Competence < Competency <... Analysis of chain concepts, which reflects functional and genetically connected psychological phenomena (or their manifestations), allows to order these concepts, to bring the great certainty in their use, and moreover to reinforce their functions as instruments of instruments of scientific knowledge.

Keywords: makings, abilities, professional important qualities, Competence, Competency.
